

HMI, M2M

Converting technology to correspond flexibly the needs of diversified and advanced user interfaces

In the smart factory, more devices will be IoT-connected that drive the application of M2M (Machine-to-Machine). At the same time, HMI (Human-Machine-Interface) will continue to advance to provide a better facility for production, operation and security onsite. To meet the growing demands from M2M and HMI, JAE has launched connectors that are compatible with certain specifications.

Key Products

- SM3
- MM60
- MM70

Key Applications

- Laptop
- Desktop
- Single board computers
- Tablet PC

Key Features SM3 Series

The SM3 Series are PCI-SIG PCI Express M.2 specification compatible connectors, that are compatible with many modules equipped on notebook PC and tablet PC, such as Wi-Fi, bluetooth, and SSD.

Key Features MM60 Series

The MM60 Series are module sockets that are compatible with the specifications defined by the PCI-SIG.

Key Features MM70 Series

The MM70 Series are graphics board connectors that are compatible with the MXM3.0 standard card edge type. They can be used to connect add-in MXM3.0 modules (graphics boards), to improve the graphics processing performance of personal computers and laptops.
