Dear Valued Business Partner,

We would like to briefly address global concerns about the coronavirus outbreak in China. The state government and regional governments made certain decisions regarding the shutdown of industrial production in the country.

We are currently gathering information from suppliers based in China. At the time of writing, however, we do not expect any supply chain interruptions and see no problems with the product inventory. Swissbit has increased its safety stocks to 2–3 months early this year to cover increasing business.

The Chinese government and the authorities there are working hard to bring the situation under control. In these difficult times, our thoughts are with everyone involved.

To insure on-time delivery of product demands, Swissbit strongly suggests that our business partners provide advance notice of forecast and purchase orders whenever possible.

We are monitoring the situation closely and will keep you up to date if supply situation changes.

Best Regards,
